Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
4 5 6
7 8 9

Output: Sum of the main diagonal: 15
Sum of the secondary diagonal: 15

Answer

```
// You are using Java
import java.util.Scanner;
class main{
    public static void main(String args[]){
        Scanner scan=new Scanner(System.in);
        int n=scan.nextInt();
        int [][] matrix=new int [n][n];
        for (int i=0;i<n;i++){
            for (int j=0;j<n;j++){
                matrix [i][j]=scan.nextInt();
            }
        }
        int x=0;
        int y=0;
        for (int i=0;i<n;i++){
            x+=matrix[i][i];
            y+=matrix[i][n-1-i];
```

```
        }
        System.out.println("Sum of the main diagonal:"+x);
        System.out.println("Sum of the secondary diagonal:"+y);
    }
}
```

Status : Correct **Marks : 10/10**
